WHAT IS A SUPER CITRUS TREE?

It's a container grown tree produced in a greenhouse that incorporates 21st century technology. For over a decade, TreeSource has innovated and refined container growing of citrus trees. A unique pot design and special growing media makes our citrus trees a **SuperCitrusTREE** that grows stronger than the traditional Ball & Burlap tree or any other container grown citrus tree.

By 2011, all of our **SuperCitrusTREES** will be grown and stored in insect-proof facilities to protect against Asian Citrus Psyllid (ACP) or Aphids carrying Citrus Tristeza Virus (CTV).

The power of the SuperCitrusTREE is in the root system.

Recent breakthroughs in nursery technology insure **SuperCitrusTREE** have massive amounts of roots that are ready to charge into your orchard's soil. The photo at right is typical of the results we'll produce with these techniques that were developed exclusively at TreeSource.

For more information on the **SuperCitrusTREE**, give us a call!

SuperTree Root System
at time of shipment.
